Knives for Peeling and Slicing

TKM's parent company, IKS Klingelberg GmbH of Remscheid Germany, has pioneered the manufacturing of high quality long knives for veneer slicing, rotary peeling and clipping for almost 100 years.

We are one of only a few industrial knife makers in the world to perfect close tolerance, precision manufacturing and accurate heat treatment of long slicing and peeling knives.

Our group's extensive research and development combines decades of industrial knife making know-how with the latest manufacturing and heat treating techniques available today.

Whether you process dense hardwoods, soft species or knotty coniferous woods our commitment to the newest technology assures that your wood processing operation is utilizing the highest efficiency and lowest cost when using **TKM** knives.

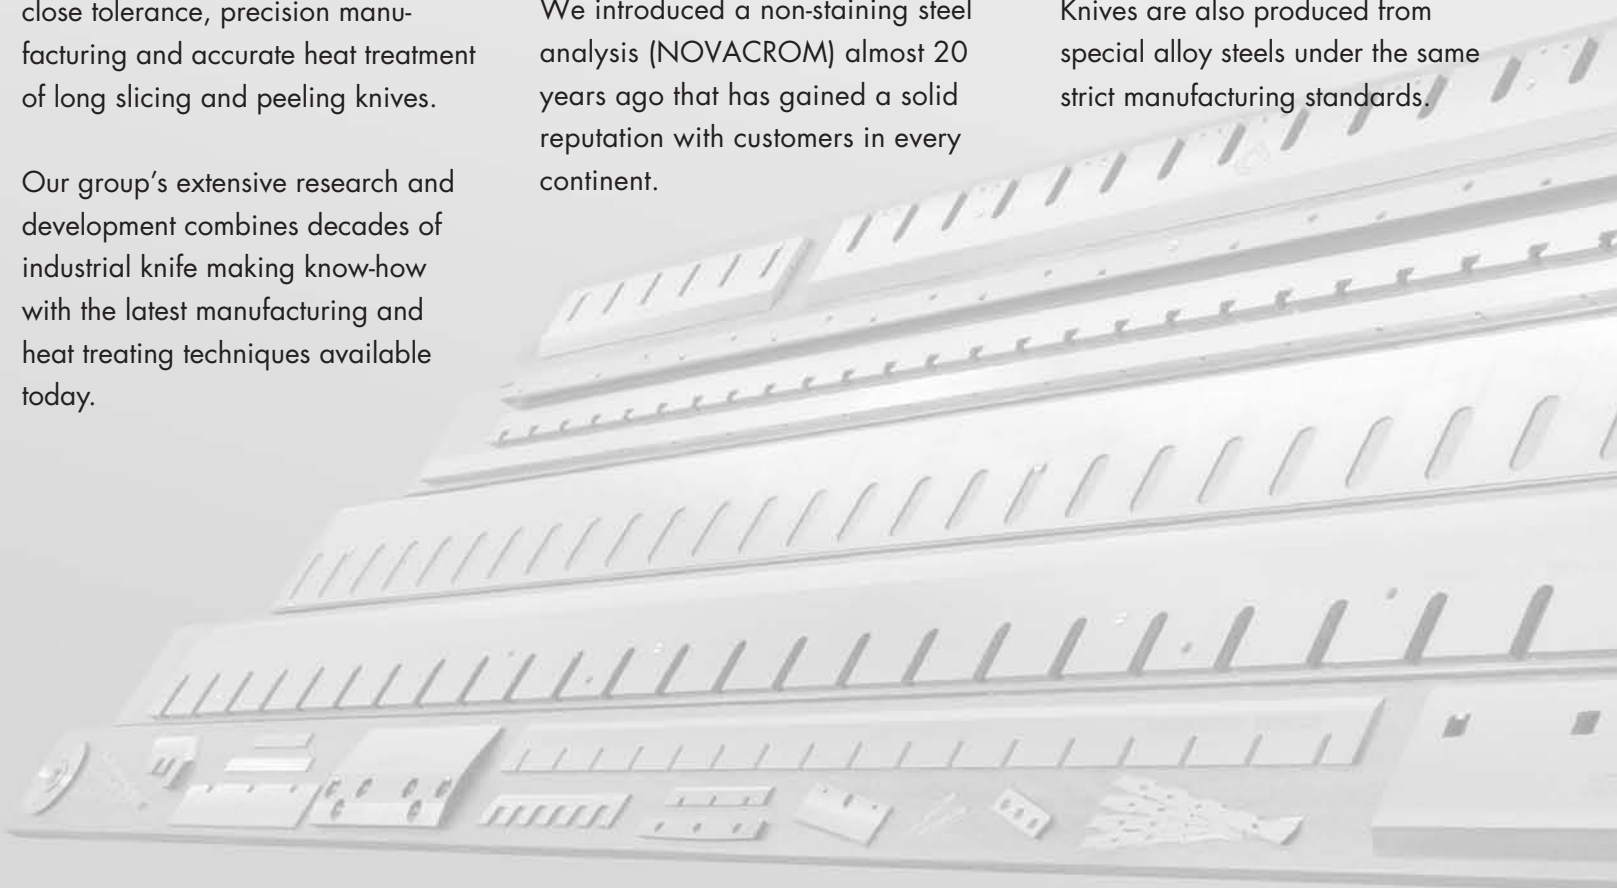

TKM veneer slicing and peeling knives are produced from several specialized steel qualities to fit your application.

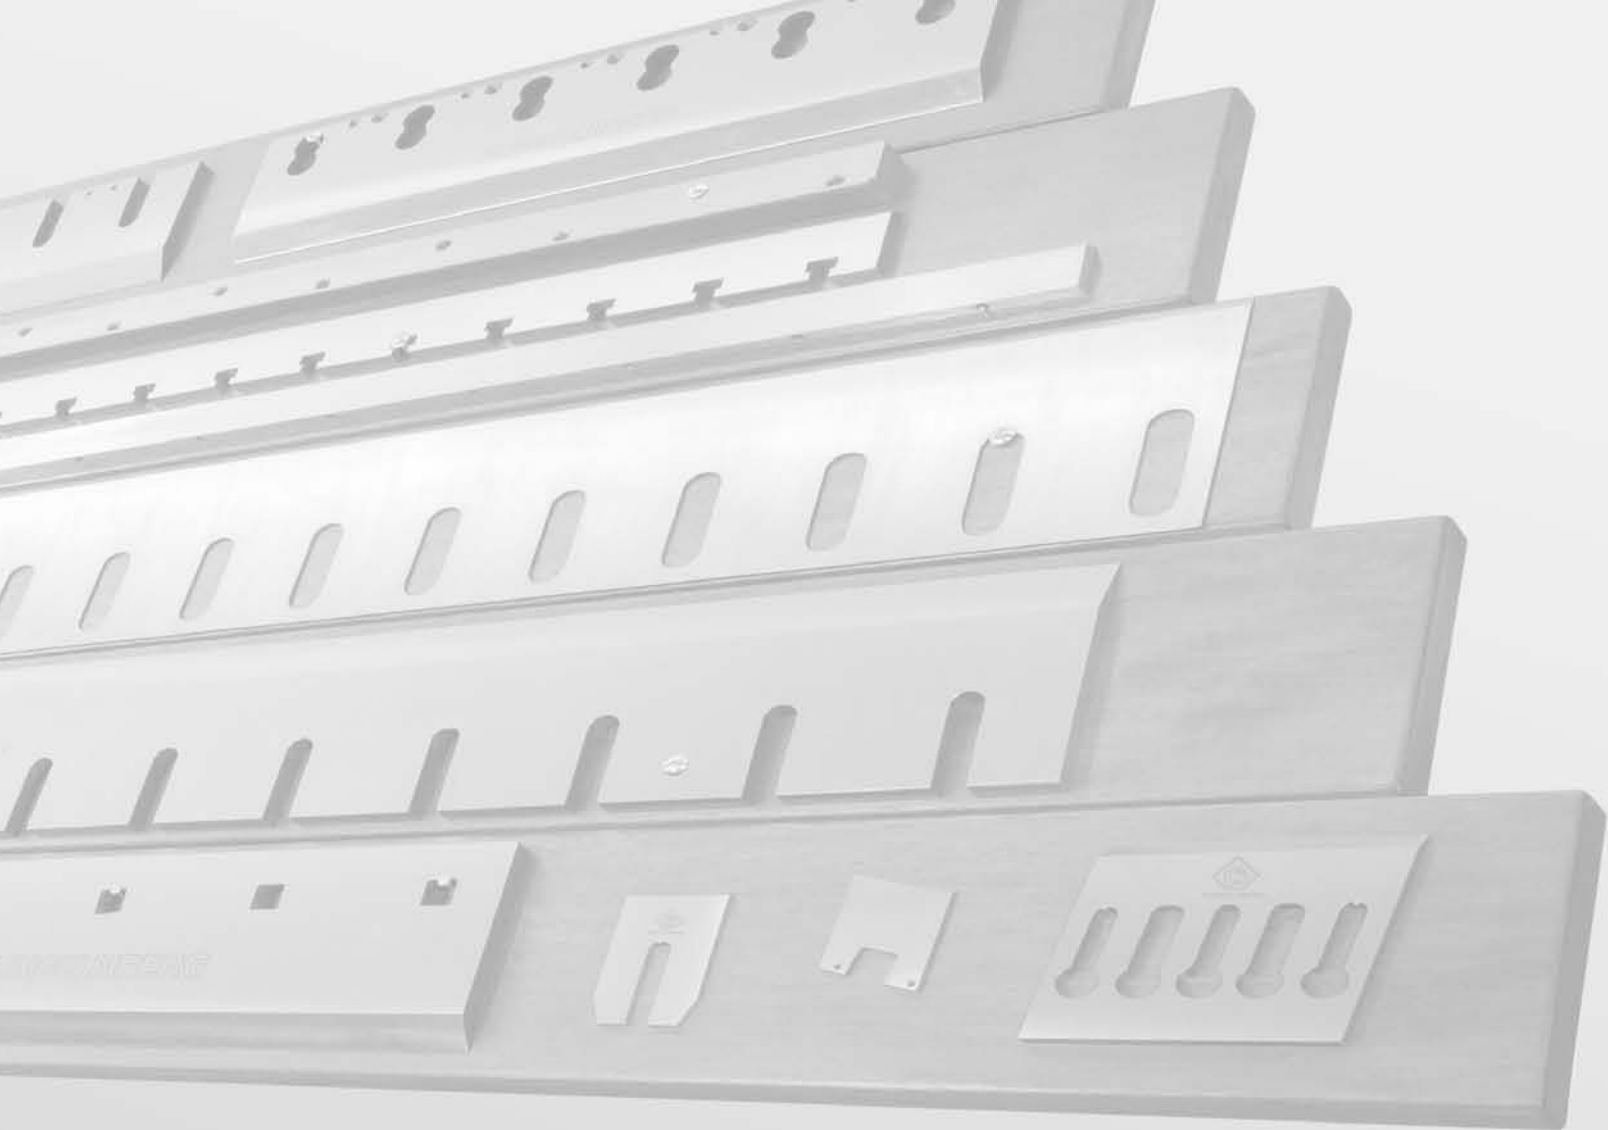

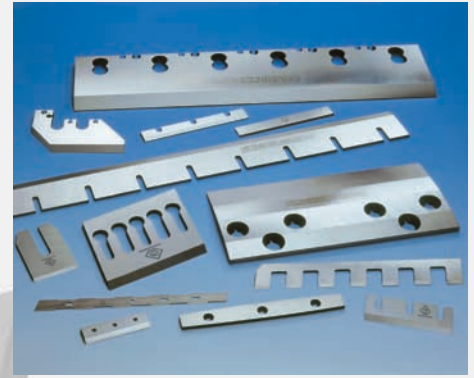

We introduced a non-staining steel analysis (NOVACROM) almost 20 years ago that has gained a solid reputation with customers in every continent.

Extreme flatness, parallelism and edge holding ability provide hours of continuous veneer cutting to closely controlled thickness requirements. Additionally, we precision polish the knife surfaces and cutting edges for the majority of knife designs.

TKM high-alloy steel slicing and peeling knives are available in lengths up to 228" (5800 mm).

TKM Pressure Bars and Clipper Knives are also produced from special alloy steels under the same strict manufacturing standards.
